DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:
The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
2. Claims 12-16 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
Claim 12, what is made of a hydrophobic polymer, the cushion or abrasive layer?

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:
A person shall be entitled to a patent unless -

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or

(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

4. Claim 1 rejected under 35 U.S.C. 102(e) as being anticipated by Lombardo et al.- 6,585,574.

Lombardo discloses an abrasive pad for abrading a surface in the presence of an abrading solution comprising a hydrophobic polymer base material, wherein a hydrophilic group is added to the surface of the polymer (col. 4, lines 5-10).

Art Unit: 3723

Claim Rejections - 35 USC § 103(a)

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 2-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lombardo, alone.

Lombardo discloses an abrasive pad for abrading a surface in the presence of an abrading solution comprising a hydrophobic polymer base material, wherein a hydrophilic group is added to the surface of the polymer (col. 4, lines 5-10). Lombardo does not disclose the claimed hydrophilic group or hydrophobic group, however, examiner takes Official Notice that the hydrophilic polymeric additive and polymer base disclosed is deemed a functional equivalent of the claimed groups and the choice of either would be within the level of ordinary skill in the art. In regard to the amount of hydrophilic added, the molecular weight, and thickness of the pad, these are all obvious design choices dependent on machining parameters.

7. Claims 12-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lombardo in view of EP-1138438.

Lombardo discloses an abrasive pad for abrading a surface in the presence of an abrading solution comprising a hydrophobic polymer base material, wherein a hydrophilic group is added to the surface of the polymer (col. 4, lines 5-10). Lombardo does not disclose the pad having a cushioning layer. However, EP-438 teaches a polishing pad having a cushioning layer of elastomer material having a thickness between 0.1-100mm (page 3, last 3 lines). Therefore, it would have been obvious to one of ordinary skill in the art at time invention was made to provide the pad of Lombardo with a cushioning layer, as taught by EP-438, in order to more uniformly planarize the entire face of the substrate.
